Preventive Radiological/Nuclear Detection Program (PRNDOS)

The Preventive Radiological/Nuclear Detection Program (PRNDOS) Program offers four of the prevent mission courses in a **4-day training program Monday through Thursday. The course is free and reimbursement for overtime/backfill is available to agencies subject to pre-approval.**

1. PRD Course (PER-243) This course focuses on the detection, alarm assessment, locating and mitigation of an event involving radiological/nuclear materials.
2. PS/BB Course (PER-246) This course is designed to train law enforcement and public safety officers to employ department procured and issued backpack radiation detection systems within the bounds of the jurisdiction/agency operational environment, including local instruments, procedures, and legal considerations. The course provides training and extensive hands-on practice with actual radioactive material so that personnel employing a backpack radiation detection system during detection and interdiction missions can detect, verify, locate, measure, and access potentially illicit radioactive material.
3. SS/RIID Course (PER-245) This course is designed to train law enforcement officers and personnel from other disciplines designated to support law enforcement agencies to perform radiological/nuclear detection secondary screener duties through the employment of radiation isotope identifier devices (RIIDs). The course provides training, which includes extensive hands-on practice utilizing actual radioactive material, to enable personnel assigned as secondary screeners to respond effectively to a request for assistance from a primary screener.
4. RIE Course (PER-355) This course uses a series of drills to reinforce skills of Emergency Responders previously trained to use radiation detections instruments.
